MAJOR ORDER ACTIONS, OCTOBER 1965

Amendments:

Northwestern Indiana - October 1 (30 FR 12463, 9/30/65). Amendment reduces the Class I seasonal differentials from \$1.40 to \$1.36 August through November, \$1.00 to \$.96 March through June, and from \$1.20 to \$1.16 in all other months.

Tri-State - October 1 (30 FR 12455, 9/30/65). Amendment replaces individual handler pooling with market wide pooling. Amended pool plant provisions require that a distributing plant dispose of at least 50 percent of its "Grade A" receipts on routes and at least 10 percent of such receipts must be disposed of on routes in the marketing area. A supply plant must ship at least 50 percent of its receipts from producers and cooperative associations to distributing plants. Action revises the monthly "standard utilization percentages" to reflect the current seasonality of production in the market. Beginning in March 1966, the supply-demand adjustment cannot differ from the preceding month by more than 4 cents. Includes provisions which are in line with compensatory payment decisions. Handlers reports are due on the 6th day of the month instead of the 5th. Other revisions in diversion and classification provisions.

FEDERAL MILK ORDER MARKETS STATISTICS

Highlights

October 1965

Producer Deliveries. A total of 147,325 producers, 10,733 fewer than in October 1964, delivered 4.1 billion pounds of milk to regulated handlers in 68 comparable markets during October 1965. This represents a decrease of 0.9 percent from producer deliveries during October 1964. Average daily delivery per producer increased from 842 pounds in October 1964 to 895 pounds in October of this year. Producer numbers, producer deliveries, average butterfat percentages, and average daily deliveries per producer for individual markets are shown in table 3.

Producer Deliveries Used in Class I. The volume of producer deliveries sold for fluid (Class I) use in the 68 markets decreased 0.8 percent from last year to a total of 2.9 billion pounds for the month of October 1965. The reason for this decrease may have been the five Sundays occurring in October this year, as compared to the four last year, and the fact that very little milk is sold on Sundays. The average utilization percentage for October was 70 percent, unchanged from last year. Seventeen markets showed an increase in the Class I utilization percentage, two showed no change, and the remaining forty-nine markets showed a decrease (see table 4).

Gross Class I sales, which comprise total Class I sales by regulated handlers, in-and-out of defined marketing areas, decreased 0.5 percent in the 68 markets for the month of October.

Minimum Prices. The weighted average Class I price paid by handlers in the 68 markets for 3.5 percent milk was \$5.14 per hundredweight, three cents higher than the \$5.11 per hundredweight price in October 1964. Minimum Class I prices in October were higher in 41 markets, unchanged in three markets, and lower in the remaining 24 markets.

Producers in the 68 markets received a weighted average blend price of \$4.63 per hundredweight for 3.5 percent milk. This is four cents higher than the October 1964 blend price of \$4.59. Producers received higher blend prices in 32 markets, the same price in three markets, and a lower price in the remaining thirty-three markets. Class prices, blend prices, and associated butterfat differentials, by markets, are reported in table 1.

Whole Milk Sales. Total in-area whole milk sales for October 1965 in 68 marketing areas are estimated at about 2.0 billion pounds, 2.3 percent below such sales in October of last year. Complete September in-area sales for total fluid milk items, and for the four major fluid product groupings (whole milk, skim milk items, mixtures, and cream), are reported in table 6.

YEAR TO DATE

Minimum Prices. The weighted average Class I price for the January-October period for the 68 markets was \$4.88, six cents higher than the \$4.82 price in 1964. The 1965 weighted average blend price was \$4.24, seven cents higher than the blend price of \$4.17 reported for this period in 1964 (see table 2).

Producer Deliveries and Deliveries Used in Class I. Total milk deliveries and deliveries used in Class I are reported for individual markets in table 5. In the first ten months of this year, compared to the same period in 1964, producer deliveries for the 68 markets were up 0.6 percent, and deliveries used in Class I were up 1.4 percent. Data for the 68 markets and for all markets are summarized below:

Producer Milk Deliveries and Deliveries Used in Class I, January-October
